Attività Scientifica

L’attività di ricerca effettuata a oggi è inerente ai seguenti progetti:

- Produzione di mutanti di HIV-1 per mutagenesi sito specifica e ricombinanti HIV-1 contenenti regioni paziente specifiche.
- Studi di suscettibilità fenotipica sotto pressione farmacologica e studi di fitness virale di ceppi di HIV-1 mutati e/o ricombinanti.
- Analisi delle mutazioni di HIV in relazione a parametri viro-immunologici, terapia antiretrovirale e progressione della malattia al fine di: i) caratterizzare parametri viro-immunologici predittivi di progressione della malattia, ii) definire i marker indicatori di progressione della malattia.
- Caratterizzazione delle aree del genoma e delle proteine di HIV che, per le loro peculiari caratteristiche, possono costituire nuovi target per farmaci antivirali.
- Caratterizzazione delle mutazioni nuove e note associate alla resistenza a farmaci anti-HIV attualmente in uso nella pratica clinica e in fase di sperimentazione. La caratterizzazione di tali mutazioni e del loro ruolo nella farmaco-resistenza è di notevole rilevanza clinica in quanto consente di migliorare la previsione della risposta ai farmaci antiretrovirali. Inoltre contribuisce ad una migliore valutazione dell'efficacia dei farmaci di nuova generazione.
- Studio e caratterizzazione genetica di HIV, HBV e HCV con le metodiche di sequenziamento classiche (sequenziamento di Sanger) e di nuova generazione (*Next-generation sequencing*): studio della comparsa e scomparsa di mutazioni associate alla resistenza ai farmaci antivirali e/o di varianti genetiche relazionate al responso alla terapia antivirale o alla virulenza.
- Raccolta e analisi di dati multicentrici per studi di coorte a livello nazionale e internazionale per la valutazione di fattori prognostici di fallimento alla terapia antiretrovirale.

Durante questi anni il Prof. Armenia ha lavorato all'estero per collaborazioni con compagnie farmaceutico-diagnostiche (Virco BVBA, Beerse, Belgium) e centri clinici europei (Pitié-Salpêtrière Hospital).

UNIVERSITY AND PUBLIC SERVICE

SERVICE ACTIVITIES SUMMARY

I have made a number of public service contributions at the University, national and international levels.

At the University level, I am member of the UCSF Chancellor's Conflict of Interest Advisory Committee and the Department of Medicine Clinical and Outcomes Research (COR) Search Committee.

At the national level, I was recently a member of the Office of AIDS Research Advisory Council (ORAC) and was the extramural co-chair for the OAR Research Toward a Cure Planning Group I was also a member of the Department on Health and Human Services Panel on Antiretroviral Guidelines for Adults and Adolescents for many years, and retired from the committee a few years ago when my term ended. I am an active member of the Scientific Committee for the INSIGHT, an NIAID-sponsored clinical trials network and was recently a member of the scientific subcommittee on HIV cure within the ACTG, another NIAD-sponsored network.

At the international level, I have been the co-chair of the "Towards an HIV Cure" initiative within the Internal AIDS Society (IAS). This initiative sponsors an annual international meeting (which I co-chair) and several active working groups. I am also a member of the Scientific Advisory Board for the European Commission sponsored "CO-morBidity in Relation to Aids" (COBRA) program. I recent co-chaired a Keystone meeting on HIV cure and have served on the organizing committee for several other international scientific meetings. I periodically provide consultation and advice to UNAIDS and WHO. I have provided peer review to a number of governmental and other funding, including programs sponsored by South Africa, Denmark, Canada and a variety of foundations and trusts.

Finally, I have been an active member of the Scientific Advisory Board for Science and Translational Medicine since its inception. I am also on the advisory board for a number of major journals, include eBioMedicine, JAIDS, and AIDS.

CONTRIBUTIONS TO DIVERSITY

CONTRIBUTIONS TO DIVERSITY Contributions to Diversity, Equity & Inclusion Guidance

I have spent my entire career working in a public health hospital, providing care to a diverse population of people with HIV, most of who face major socioeconomic challenges. The focus of my research has largely been on developing novel strategies aimed at serving this population. This includes a deep investment in identifying a safe, globally scalable HIV cure. I believe that such a cure will prove to be the most effective way to overcome many of the disparities in how HIV care is delivered, both nationally and globally. Towards this end, I have led several international panels aimed at guiding the development of a curative strategy that will have a global impact.

I received the Lifetime Achievement in Mentoring Award from UCSF in 2022. In the letter written on my behalf, it was noted that I had mentored “40 scientists over the last 20 years”, the majority of whom were women in science. Of those who I most closely mentored, and who contributed letters on my behalf, 16 of 25 were women. I have also sought to devote resources

whenever possible to those who are underrepresented in medicine. I have, for several years, been co-leading a mentoring program for early-stage African investigators, the highlight of which has been an annual three-day workshop held in South Africa. Through this program, I have provided mentorship to several early-stage African investigators, many of whom are now starting their own research program.

TEACHING AND MENTORING

TEACHING SUMMARY

Over the past several years, my teaching responsibilities have continually evolved away from a hospital and clinic setting to the research setting. I am now the formal primary mentor for several research fellows and junior faculty members. These mentees range from clinical research fellowships (most in infectious diseases) to late Assistant Clinical Professors. In addition to the direct day-to-day mentoring and supervision of mentees in my own group, I devote a substantial amount of my time to the less traditional co-mentoring of laboratory-based investigators, many of whom are based at other institutions. I devote over 25% of my effort to these teaching activities. My effort was supported by a K24 for ten years. In addition to mentoring, I lecture frequently to community groups, and give presentations at UCSF and elsewhere.

MENTORING SUMMARY

Most of my mentoring is provided in the context of an ongoing, prospective, pathogenesis-oriented cohort of HIV-infected adults (SCOPE). This cohort functions as an entry point for research fellows and junior investigators interested in human subjects-related HIV/AIDS research. All research fellows and junior investigators under my supervision are encouraged to have two “primary” mentors: myself and either a laboratory-based investigator or an epidemiologist. I provide overall guidance and focused training on the clinical aspects of translational research.

RESEARCH AND CREATIVE ACTIVITIES

RESEARCH AND CREATIVE ACTIVITIES SUMMARY

Over the past 20 years I have led a growing group of clinic- and laboratory-based investigators interested in performing translational and clinical research. Most of our work has focused on the immunopathogenesis of HIV infection. This work has been supported by the evolving clinical research infrastructure that I co-direct. At center of this infrastructure is a biologically-oriented cohort of HIV-infected adults of over 2000 adults (the SCOPE cohort). Doznes of individual investigators (many of them just starting their career) are supported each year. Over 35,000 biologic specimens have been distributed since the cohort's inception. We have also structured SCOPE so that it is able to support the regulatory, data management, recruitment and operational needs of investigators interested in performing intensive, single-center investigator-initiated clinical trials. Approximately 20 clinical trials have been supported. These studies have led to many of our most important contributions.

My own research agenda has continually evolved in response to changing unmet clinical needs of our patient population. Our initial work focused on patients who harbored multi-drug resistant HIV. We observed that (1) certain drug-resistance mutations reduce viral fitness in vivo, (2) some drug classes had residual treatment benefit even in presence of drug-

resistance, and (3) reduced immune activation during partial viral suppression independently predicted subsequent clinical benefit.

We subsequently expanded our interest to include individuals who were able to control HIV replication in absence of therapy ("elite" controllers), and observed that these individuals have higher than normal levels of both immune activation and atherosclerosis and that strong T cells in blood and mucosa tissues are strong correlates of control. We pioneered work on the study of inflammation, virus control, comorbidities (particularly heart disease), aging, transplantation, and coinfections (CMV, EBV, viral hepatitis).

More recently, we have focused on the pathogenesis of long-term antiretroviral treatment-mediated viral suppression. We have found that inflammation is elevated during otherwise effective therapy, that immune activation likely contributes to suboptimal CD4+ T cell gains during therapy, that CMV, microbial translocation, thymic dysfunction and perhaps residual HIV replication contribute to excess immune activation during therapy, and that elevated immune activation correlates with or predicts disease progression. We have also documented the degree to which cardiovascular disease and other conditions persist despite long-term treatment-mediated suppression of HIV replication.

We are now very actively involved in HIV cure research. I am one of the principal investigators for a large UM-funded Martin Delaney Collaboratory (DARE). Our consortium includes dozens of investigators from US and abroad. The overall objectives of DARE are to develop an cure or remission for HIV disease. I also recent directed the amfAR Institute for an HIV Cure.

Once the SARS-CoV-2 pandemic spread to San Francisco, we leveraged the SCOPE infrastructure to rapidly begin enrolling adults who have a recent history of COVID-19 into a new cohort (Long-term Impact of Infection with a Novel Coronavirus, or LIINC, NCT04362150). LIINC was designed specifically to study the long-term clinical consequences of COVID. We have identified nearly 100 cases individuals with persistent symptoms (PASC) and initiated several studies addressing the pathogenesis of this syndrome. We have distributed over thousands of samples and are supporting dozens of collaborations. We are now participating in RECOVER initiative, a national research program aimed at defining the epidemiology and biology of PASC.

Our research environment has proven to be a fertile environment for junior investigators. This includes those mentees for which I have primary responsibility and a large and evolving network of laboratory-based investigators at UCSF and elsewhere.

In addition to my clinical and translational investigation, I maintain a primary care clinic for people living with HIV (PWH).

We studied the T cell counts in inflammation in a diverse cohort of people living with HIV. We identified the CD4/CD8 ratio as a potential biomarker of disease outcomes during antiretroviral therapy. We also studied the association between this ratio and inflammation. I was the principle investigator of the cohort. I co-designed the study and help direct the data analysis.

We assembled a cohort of well-matched male and female people living with HIV. We found that the size and activity of the reservoir differed based on biologic sex. In a companion study published in PNAS, we found that estrogens prevent latency reversal, and that this affect may account for sex-related differences in viral load and latency. I was the principle investigator of the clinical cohort. I co-designed the study and help direct the data analysis.

PMCID: PMC5675377

Early initiation of antiretroviral therapy may be curative. This study describes the earliest treated HIV-infected adults reported to date and found that treatment in this setting reduced the amount of HIV by several orders of magnitude but was not curative. I designed the study and directed a massive collaboration involving a large team of public health experts, clinical scientists, virologists and immunologists.

We describe the size of the HIV reservoir during long-term antiretroviral therapy. We found that putative intact (replication-competent) proviral genomes decayed more rapidly than defective genomes. I helped formulate the hypothesis, designed the study and co-directed the data analysis.

This randomized clinical trial assessed the safety and efficacy of a novel TLR-7 agonist (vesatolimod) in people with HIV who controlled HIV prior to going on antiretroviral therapy. We found that vesatolimod enhanced innate immunity, reduced the size of the intact provirus level, and delayed time-to-rebound. I helped formulate the hypothesis, designed the study and co-directed the data analysis.

I chaired a program of several expert working groups that collectively developed a global strategy for developing an effective and scalable cure for HIV infection. The resulting publication provided a five-year roadmap for making progress towards a cure.

Dall'a.a. 2001-2002 al 2007-2008 ha frequentato la Clinica e Laboratorio di Malattie Infettive dell'Università degli Studi di Siena, dapprima come studente interno, poi come medico specializzando e infine come medico interno. Durante tale periodo ha acquisito competenze sulla gestione clinica infettivologica ed internistica di pazienti adulti e pediatrici. Ha frequentato inoltre presso le U.O. di Malattie Infettive Ospedaliere di Siena, Arezzo e Grosseto approfondendo le conoscenze per il trattamento del paziente epatopatico ed HIV positivo.

Dal luglio 2007 al dicembre 2008 gli è stato conferito incarico a tempo determinato presso il Pronto Soccorso Pediatrico di Grosseto e dei Presidi ad esso correlati nel servizio per l'attivazione di Codici Bianchi e Azzurri. Durante tale periodo ha approfondito aspetti legati alla gestione delle malattie infettive in età pediatrica ed ha acquisito inoltre competenze sulla gestione di urgenze ed emergenze pediatriche mediche e chirurgiche.

Dall'aprile al giugno 2008 è stato titolare di incarico a tempo determinato per la Pediatria di libera scelta nei comuni di Sovicille, Chiusdino e Monticiano dell'USL 7 di Siena, acquisendo competenze per la valutazione clinico-anamnestica e impostazione diagnostico-terapeutica di soggetti pediatrici con patologie acute e croniche infettivologiche e non.

Da settembre 2008 al Marzo 2013 ha collaborato all'attività clinica presso le strutture dell'Istituto di Clinica delle Malattie Infettive dell'Università Cattolica del Sacro Cuore di Roma dapprima con contratto a progetto, poi come dottorando e infine con la qualifica di dirigente medico a tempo determinato. Durante tale periodo ha acquisito esperienza nella impostazione diagnostico-terapeutica ospedaliera e ambulatoriale di patologie infettivologiche acute e croniche (epatiti virali, tubercolosi, infezioni virali, batteriche, fungine e parassitarie nell'ospite immunocompetente e immunodepresso).

In particolare si è occupato della gestione ambulatoriale/day hospital e dell'assistenza domiciliare a pazienti HIV-positivi. E' stato responsabile dell'arruolamento e della gestione di pazienti HIV+ nell'ambito di trials clinici. Ha partecipato alla gestione della sorveglianza epidemiologica sull'infezione da HIV presso il Centro di Riferimento AIDS del Policlinico.

Ha prestato la propria opera presso l'Unità di Consulenza Infettivologica Integrata del Policlinico, struttura dedicata, oltre che alla tradizionale gestione delle consulenze infettivologiche presso i reparti di medicina, chirurgia e terapia intensiva, anche alla sorveglianza attiva e gestione delle infezioni da germi multiresistenti, alla sorveglianza e gestione delle profilassi post-esposizione occupazionale ad agenti a trasmissione parenterale (HIV, HBV, HCV) e respiratoria (tubercolosi e virus respiratori). Nell'ambito dell'attività di consulenza ha dedicato principalmente la propria attenzione alla gestione delle complicanze infettivologiche nel paziente sottoposto a trapianto d'organo, nel

paziente dializzato e nel paziente con problematiche neurologiche e gastroenterologiche, oltre che in pazienti con varie patologie internistiche o chirurgiche.

Ha inoltre partecipato a turni di guardia interdivisionale comprendente reparti di malattie infettive, geriatria e riabilitazione.

Durante tale periodo ha perfezionato le proprie competenze nell'autonoma gestione dei pazienti con problematiche infettivologiche, migliorando la propria manualità nell'esecuzione di manovre invasive di pertinenza infettivologica (es. rachicentesi). Non Hodgkin lymphomas in HIV patients studied at Ospedale di Careggi: a review of the series of cases in the period from 2004 to 2008

Supervisor: Prof. Alessandro Bartoloni, Careggi Hospital

Study design: Observe the correlation between Non Hodgkin Lymphomas (LNH) and HIV patients, with particular attention towards treatment and prognosis. 17 patients with a diagnosis of LNH and HIV were studied in a period of time lasting from 2004 to 2008. Mean age of the patients was 46 years (range 32-76), 16 males and 1 female. They were observed for a mean time of 25 months, at the end of the observation period 12 patients were still alive, 4 died and 1 dropped out from the study. All the death cases were not related to the treatment received but were determined by disease progression. Our study demonstrated that it is possible to provide the same “dose dense” to HIV and non HIV-patients without experiencing significant differences in terms of toxicity and adverse effects.

I've been a speaker in the national and international congress on HIV. I've been a sub-investigator in four RCT (LCD-CDAD-10-07 [antibiotics], Rempex 505 [antibiotics], studio A0001B [mAbs], EDOLAS [antivirals]). I have been a teacher of several courses for nurses that have been held in my institution. I am fluent in English (as certified by Cambridge University IELTS certification 7 in 2010) and familiar with Spanish. Together with other colleagues, I edited the translation of the book "Prevenzione delle infezioni correlate all'assistenza" by Sanjay Saint et al. Excellent user of MS Office (Word, PowerPoint, Excel). I have good experience in Statistical analysis with Stata (v 14.0).
